

Firm, beautiful teeth

A natural smile in just 5 days?
Immediate implantology makes it possible!

A brief comparison of immediately resilient dental implantology with traditional treatment methods

Immediate Implantology

Bone augmentation:

- without bone augmentation

Treatment duration:

Duration of stay in case of total restoration of both jaws, max. 5 days

Healing times:

- no healing times!
- immediately resilient teeth within a few days

Follow-up checks / Arrivals:

- at the earliest after 6-12 months
- 1 Arrival
- exchange of the bridge with the desired material on request

Cost:

- Total restoration lower jaw, max € 7800.-- incl. therapy bridge
- Total restoration of upper jaw, max € 8800.00 incl. therapy bridge
- General anesthesia € 1200.--

Traditional Dental Implantology

Bone augmentation:

- with few jaw bones, bone augmentation always takes place beforehand

Treatment duration:

- without bone augmentation up to approx. 3 weeks
- with bone augmentation min. 9-18 months

Healing times:

- depending on healing phase 9-18 months
- traditional methods are never immediately resilient
- Teeth can only be loaded after the healing phase

Follow-up checks / Arrivals

- regular dental hygiene approx. every 4-5 weeks
- multiple arrivals essential for follow-up checks
- definitive bridge can only be applied after healing phase

Cost:

The costs cannot be estimated if bone augmentation is required. Depending on the oral situation, treatment method, etc., massive costs of up to € 60,000 may be incurred. Without guarantee that a bone reconstruction will be really successful.

Opt for immediate implantology
Firm, natural teeth

Until a few years ago, dental implantology was only reserved for a limited social class. High treatment and accommodation costs, multiple journeys to the clinics, etc. could generally only be afforded by financially well-off patients.

However, dentistry has made great progress in the field of implantology in recent years. New findings in the design of implants, as well as modern materials, enable treatment methods today that were unthinkable just a few years ago.

The world's most modern treatment method
A solution for every case

Immediately resilient dental implantology is the ultimate solution. In contrast to traditional methods, a successful treatment can be carried out even if the jawbone is not very present. It starts where other methods have long since had to give up being able to present solutions.

However, this type of implantology requires a complete rethink on the part of the dental implantologist. The procedure has to be learned and requires years of practice. For this reason, there are currently only a handful of dentists in Central Europe who successfully use and offer this method.

The main advantages of this treatment method
fast + safe + cheap

Numerous advantages determine the immediately resilient dental implantology.

- Treatment within only 72 hours
- without painful bone augmentation
- without months of healing time
- can be loaded again in only 5 days

Even patients suffering from diabetes or osteoporosis can be treated. Smokers no longer have to do without dental implants. Traditional methods cost several times as much. This makes this method affordable for normal earners as well.

Procedure of treatment with dental implants

Laugh again in 5 days

A dental treatment with immediately loadable implants differs considerably from the procedure of traditional methods. It is much faster, largely painless and multiple consultations are completely unnecessary.

The surgery:

Implants are placed in a single treatment session. No matter whether only one jaw or both jaws are rehabilitated. Immediately afterwards, the impression for the prosthetics is taken. Of course, you can also have a general anaesthetic on request.

Fabrication of temporary prosthetics:

In only 3-5 days, your metal-supported bridge with teeth and remodeled gums will be fabricated and adapted to you.

Follow-up checks and definitive bridge:

After about 6-12 months, or at the earliest after 6 months, the definitive bridge is attached. This can also be made of natural looking zircon.

Healing processes can be very different. Possible follow-up checks should be clarified with your implantologist on a case-by-case basis.

Care of your teeth:

The implants developed for this treatment method are extremely easy to care for. We recommend dental brushes and toothpastes without abrasives.

Ask your implantologist or contact your dental hygienist for more information.

Choose this treatment method.

It will restore your self-confidence in a few days. You can eat and enjoy painlessly again. That is quality of life. Finally show your brightest smile again. People will envy you and you yourself will be enthusiastic about the result!

Traditional methods can never give you equivalent results at this cost and in this short time.

No more removable prostheses!

Have you worn removable prostheses for years? If so, successful treatment with traditional methods is often no longer possible.

Unless you decide on a painful, time-consuming and cost-intensive bone reconstruction. Your jawbone may have receded too much.

What patients say about us **enthusiastic + satisfied!**

I am enthusiastic about the result and stay!
Thank you Dr. Nóra Fazekas, thank you Sinus Dental.

Irmgard O. (63) from Vienna / Austria

I'm just overjoyed!
And the price is simply a hammer!

Francesca L. (38) from Bologna / Italy

It was completely unknown to me that there was a method
with immediately loadable implants. I have never regretted it.

Sebastian R. (67) from Berlin / Germany

In order to understand why traditional methods are out of
the question for us, a short phone call was sufficient.

Elfriede und Maximilian K. (72/78) from Vienna / Austria

As a working woman, only this method could be considered.
I have never regretted it and can only recommend it.

Roswitha K. (45) from Vienna / Austria

Implantologists talk about immediate implantology

Bone augmentation is out

Dr. med. dent. Mohammad Abusharkh / Israel

It is a new and completely different method. For me, immediately resilient dental implantology is the future of dentistry.

This type of treatment will revolutionize dentistry in a few years and make traditional methods superfluous.

Dr. med. dent. Nóra Fazekas / Hungary

My goal has always been to practice the best possible treatment. And the great success proves me right.

Immediately resilient dental implantology begins where traditional methods have long since had to give up. It has no alternative for me!
